

Issue from the 22/04/2010 Supplying of ADEUNIS RF wireless solutions for electronic visual display systems We are surrounded by systems of electronic light display which inform us, welcome us, orient us, prevent us from doing something, reassure us, and all this in a number of different sectors. In its capacity as a radio expert, ADEUNIS RF brings real added value to the installation, the setting-up and also the updating and real-time management of digital information of these electronic displays... Local information relayed by multi-line electronic visual display units on poles or integrated into totem display units Thanks to the implementation of a dozen display panels distributed all over the area, this region of Isère has been able to publish news with push technology, so allowing a lot of people to access information updated in real-time. The solution implemented by ADEUNIS RF allows them to... Real-time display of the number of parking spaces available at an airport Saving time for travellers and orienting them efficiently whilst making traffic flow on the site make up the main aims for this international airport. For this, the airport installed exterior electronic display units at ... Electronic display units – or totems – for fuel These digital display units displaying fuel prices that you find all along the motorway are fantastic for motorists who are looking to tank up. Thanks to them, the motorists are aware of the actual prices and can choose the service station they want. However, the installation of these display units isn't simple and could give rise to considerable installation costs, particularly with regard to cabling. This is what the solution from ADEUNIS RF, solves perfectly thanks to ... Electronic display units for queue management As citizens and users of public services, we have all had to wait our turn in a queue at some point. Electronic display units allow the management of these queues which we find forming a part of our daily life, for example, at the post office, at the bank and in hospitals. However, it must be said that these systems are very costly to install [...] But, the solution proposed by ADEUNIS RF... Electronic score displays Score, time, speed, fouls.... information transmitted during the course of a match on electronic display units must be updated in real-time and be extremely reliable. Other constraints linked particularly to the mobility of the control panels must also be taken into account whilst designing an appropriate solution at a low cost. The ARF34 module from ADEUNIS RF fulfils these demands ... These examples of the usage of the Adeunis RF wireless solutions in the display and information sector are not the only ones.
